OBJECTIVE

Aspiring Full-Stack Developer with hands-on experience in the MERN stack (MongoDB, Express.js, React.js, Node.js), focused on building scalable and production-ready web applications. Currently expanding knowledge in machine learning and solving real-world problems using modern technologies.

PROJECTS

Resume Builder Web Application React.js, Node.js, Express.js, LowDB

- Developed a full-stack resume builder generating ATS-friendly resumes dynamically.
- Implemented dynamic forms, live preview, and real-time editing features.
- Enabled authentication-based data storage for saving and updating resumes.

Expense Tracker Web Application React.js, Node.js, Express.js, MongoDB

- Built a full-stack expense tracking system with secure authentication and user-specific data handling.
- Implemented an analytics dashboard with category-wise expense summaries and insights.
- Designed RESTful APIs for efficient data management and scalability.

Automatic Timetable Generator (In Progress)

- Developing a constraint-based scheduling system to automate subject and faculty timetable generation.
- Designing algorithms to handle scheduling conflicts, resource allocation, and time-slot optimization.
- Implementing dynamic input handling, multi-department scalability, and real-time schedule updates.
- Tech Stack: React, MySQL, Python
